Sample.2

Meeting Information

Meeting Title	Sample.2
Date	2026-07-02
Duration	03:58
Participants / Attendees	jij, Speaker 3, Speaker 4
Prepared By	MeetScribe

EXECUTIVE SUMMARY

The meeting introduces RingCentral's AI APIs for conversational intelligence. Tom (jij) initiates the discussion by asking Sumit (Speaker 3) about AI in the context of conversations. Sumit explains that beyond basic speech-to-text/text-to-speech, these APIs offer interaction, sentiment, and emotion analysis, particularly useful for contact centers to gauge call sentiment. Will (Speaker 4) then details the API categories (audio and text-based) and highlights three popular APIs: speech-to-text (for transcribing audio with punctuation), speaker diaries API (for identifying who spoke when), and speaker identification API (for recognizing).

KEY DISCUSSION POINTS

- RingCentral's AI APIs for conversational intelligence are introduced as the main topic of discussion.

Timestamp: 00:38 - 00:46 | Speaker(s): jij

- AI's role in conversations extends beyond basic speech-to-text and text-to-speech to include interaction analysis, sentiment analysis, and emotion analysis.

Timestamp: 00:47 - 01:33 | Speaker(s): jij, Speaker 3

- These AI APIs provide significant power for use cases such as contact centers, enabling supervisors to understand the sentiment level of incoming calls.

Timestamp: 01:33 - 02:00 | Speaker(s): Speaker 3

- RingCentral's APIs are supported in two main categories: audio APIs and text-based APIs.

Timestamp: 02:01 - 02:50 | Speaker(s): jij, Speaker 4

- Three top-most used conversational intelligence APIs are speech-to-text (which converts audio to text with punctuation), speaker diaries API (which identifies who spoke when), and speaker identification API (which detects and identifies speakers if trained).

DECISIONS TAKEN

No decisions were extracted.

ACTION ITEMS

Task	Owner	Due Date	Priority	Status
Work toward releasing the program generally available to the public	Unassigned	soon	Low	open
