Sample.2

Meeting Information

Meeting Title	Sample.2
Date	2026-07-03
Duration	03:58
Participants / Attendees	Speaker 2, jiya, Speaker 4
Prepared By	MeetScribe

EXECUTIVE SUMMARY

The meeting, hosted by Tom (Speaker 2), introduces Sumit (jiya) and Will (Speaker 4), who discuss RingCentral's AI APIs. Sumit explains that AI in conversations extends beyond basic speech-to-text and text-to-speech, enabling advanced interaction, sentiment, and emotion analysis, particularly useful for contact centers to gauge call sentiment. Will details the API categories: audio and text-based. He highlights three popular APIs: speech-to-text (which converts audio to text with punctuation), speaker diarization (identifying who spoke when), and speaker identification (recognizing specific speakers if trained). Tom concludes by.

KEY DISCUSSION POINTS

- **The meeting topic is RingCentral's AI APIs around conversational intelligence.**
Timestamp: 00:38 - 00:46 | Speaker(s): Speaker 2
- **AI in the context of conversations goes beyond speech-to-text and text-to-speech, offering capabilities like interaction analysis, sentiment analysis, and emotion analysis.**
Timestamp: 01:03 - 01:33 | Speaker(s): jiya
- **A key use case for AI APIs is in contact centers, where supervisors can use sentiment analysis (e.g., a 0-5 pointer) to understand the sentiment level of incoming calls.**
Timestamp: 01:33 - 02:00 | Speaker(s): jiya
- **RingCentral supports APIs in two main categories: audio APIs and text-based APIs.**
Timestamp: 02:20 - 02:50 | Speaker(s): Speaker 4
- **Three popular conversational intelligence APIs include speech-to-text (converting audio to text with punctuation), speaker diarization (identifying who spoke at what time), and speaker identification (detecting and naming speakers if the AI model is trained).**

DECISIONS TAKEN

No decisions were extracted.

ACTION ITEMS

Task	Owner	Due Date	Priority	Status
Release the program generally available to the public	Unassigned	N/A	Low	open
