EXECUTIVE SUMMARY

The meeting introduces RingCentral's AI APIs for conversational intelligence, with Tom facilitating the discussion. Sumit explains that AI in conversations goes beyond basic speech-to-text, enabling advanced features like interaction, sentiment, and emotion analysis, which are particularly useful for contact centers to gauge call sentiment. Will elaborates on the API categories (audio and text-based) and highlights three popular APIs: speech-to-text for transcribing audio with punctuation, speaker diaries for identifying who spoke when, and speaker identification, which can name speakers if the AI model is trained. The program is currently in beta, with a general release planned soon, and feedback from the public is encouraged.
