

MINUTES OF MEETING

RingCentral AI APIs for Conversational Intelligence

Meeting Information

Date	2026-06-21
Duration	4 min
Speakers Detected	3
Generated By	MeetScribe

EXECUTIVE SUMMARY

The meeting begins with introductions from Tom (Speaker 2), Sumit (Speaker 3), and Will (Speaker 4). Tom introduces the main topic: RingCentral's AI APIs for conversational intelligence. Sumit explains that AI in conversations extends beyond basic speech-to-text and text-to-speech, enabling interaction, sentiment, and emotion analysis, which is particularly useful for contact centers to gauge call sentiment. Will then elaborates on the two categories of APIs: audio and text-based. He highlights three top conversational intelligence API use cases: speech-to-text for transcribing audio with punctuation, speaker diarization for identifying who spoke when, and speaker identification which, if trained, can name the speakers. Tom concludes by thanking the speakers and announcing that the program is currently in beta, with a general release planned soon, encouraging feedback from the public.

Follow-up activities were assigned to the assigned owners, with progress to be tracked through the action items below.

TOPICS DISCUSSED

- RingCentral AI APIs
- Conversational Intelligence
- Speech-to-text capability
- Text-to-speech capabilities
- Interaction analysis
- Sentiment analysis
- Emotion analysis
- Contact center use cases

KEY DISCUSSION POINTS

- The meeting's topic is RingCentral's AI APIs around conversational intelligence.

Timestamp: 00:38 - 00:46 | Speaker(s): Speaker 2

- AI in the context of conversations goes beyond speech-to-text and text-to-speech, enabling interaction analysis, sentiment analysis, and emotion analysis.

Timestamp: 01:03 - 01:33 | Speaker(s): Speaker 3

- AI APIs provide significant power for contact center use cases, allowing supervisors to understand call sentiment levels (e.g., using a 0-5 pointer).

Timestamp: 01:33 - 02:00 | Speaker(s): Speaker 3

- RingCentral supports APIs in two categories: audio APIs and text-based APIs.

Timestamp: 02:20 - 02:50 | Speaker(s): Speaker 4

- Three popular conversational intelligence API use cases include speech-to-text (transcribing audio with punctuation), speaker diarization (identifying who spoke when), and speaker identification (detecting and naming speakers if trained).

Timestamp: 02:20 - 03:36 | Speaker(s): Speaker 4

- The RingCentral intelligent APIs program is currently in beta and will soon be released generally available to the public.

Timestamp: 03:37 - 03:58 | Speaker(s): Speaker 2

DECISIONS TAKEN

No decisions were extracted.

ACTION ITEMS

Task	Owner	Due Date	Priority	Status
Stay tuned for the general availability release of RingCentral's intelligent APIs.	Unassigned	N/A	Low	open
Provide feedback on the RingCentral intelligent APIs program.	Unassigned	N/A	Low	open

NEXT STEPS

- Team will stay tuned for the general availability release of RingCentral's intelligent APIs.
- Team will provide feedback on the RingCentral intelligent APIs program.
