EXECUTIVE SUMMARY

The meeting introduces RingCentral's AI APIs for conversational intelligence, with Tom facilitating the discussion. Sumit explains that AI in conversations extends beyond basic speech-to-text, enabling interaction, sentiment, and emotion analysis, which is particularly useful for contact centers. Will then details the two categories of APIs (audio and text-based) and highlights three popular ones: speech-to-text for transcribing audio with punctuation, speaker diarization for identifying who spoke when, and speaker identification for recognizing specific speakers if trained. Tom concludes by announcing that the program is currently in beta and will soon be generally available, inviting feedback from the public.
