EXECUTIVE SUMMARY

The meeting introduces RingCentral's AI APIs focused on conversational intelligence, with Tom moderating a discussion with Sameer and Will. Sameer explains AI in the context of conversations, emphasizing capabilities beyond speech-to-text, such as interaction, sentiment, and emotion analysis, particularly useful for contact center scenarios. Will details the two categories of APIs supported: audio and text-based. He highlights three popular conversational intelligence APIs: speech-to-text (which includes punctuation), speaker diarization (identifying who spoke when), and speaker identification (recognizing trained speakers). The program is currently in beta, with plans for a general public release soon, and feedback is encouraged.
